Clinical Reference Laboratory

ICMR Reg.No: GAYCRPLHT

Patient Name : Mr HARISH PADI
Age/Sex : 34 Years/Male
Reference Doctor : SELF
Reference Customer : SELF
VialIDs : 14501

PIN : GC17509
CenterID : GCAPBZA0003
Sample Drawn on : 2021-07-03 10:28
Submitted on : 2021-07-03 10:28
Reported on : 2021-07-05 11:15

Barcode : 

MOLECULAR BIOLOGY

Profile : SARS-CoV-2 (COVID-19)

Sample type: Nasopharyngeal swab / Throat Swab

<u>Test name</u>	<u>Result</u>	<u>Unit</u>	<u>Reference interval</u>
SARS-CoV-2 (COVID-19)	NOT-DETECTED	N/A	N/A

Method : Rt pcr

Interpretation :

Interpretation :

- * Negative result indicates the absence of SARS-CoV-2 (COVID-19) in the submitted specimen.
- * Positive result indicates the presence of SARS-CoV-2 (COVID-19) in the submitted specimen.

Notes :

- * Positive results are indicative of SARS CoV-2 RNA; clinical correlation with patient history and other diagnostic information is necessary to determine patient infection status.
- * Negative result does not preclude infection with SARS-CoV-2 virus and should not be the sole basis of a patient management decision.
- * Negative results do not rule out the possibility of Covid-19 infection, limitations includes but not limited to the following:
 - Improper specimen collection
 - Mutation in the SARS-CoV-2 virus or PCR inhibition
- * NOTE: The RT-PCR test presently being conducted is qualitative in nature. Ct values may give a rough estimate of viral load. There are no reliable studies to definitively prove a direct correlation between disease severity / infectiousness and Ct values. Viral load does not have much role in patient management.
